

The Shopify Speed & Conversion Checklist

25 real, actionable checks — the same things we look at on every audit call, before we ever pitch you anything.

1. SPEED & PERFORMANCE

- Test your product page speed separately from your homepage — not just the homepage score.
- Check how many apps are installed that you no longer actually use.
- Confirm images are served at the size they're displayed, not scaled down by the browser.
- Check that below-the-fold images are lazy-loaded properly.
- Test load time on real mobile data, not just wifi.

2. MOBILE EXPERIENCE

- Try completing a full purchase yourself, on your own phone, from product page to confirmation.
- Check that buttons are comfortably tappable, not just technically clickable.
- Confirm checkout fields use the correct keyboard type (numeric for card numbers, email for email).
- Check that filter menus don't take over the entire screen and hide products.
- View your top product photos at actual mobile width, not just on a large monitor.

3. CHECKOUT & CONVERSION

- Count the number of steps from product page to order confirmation.
- Confirm autofill works correctly on your checkout form.
- Check that shipping costs are shown clearly before the final step, not as a surprise.
- Confirm your "Add to cart" button stays visible/accessible while scrolling on product pages.
- Test what happens when a customer applies an invalid discount code — is the error message clear?

4. TRUST & CREDIBILITY

- Confirm real customer reviews are visible on your top product pages.

- Check that your return/refund policy is easy to find, not buried in a footer link.
- Search your own brand name in an incognito window — what shows up?
- Confirm your Google Business Profile is claimed, accurate, and up to date.
- Check what your site shows on a broken or mistyped link (a real 404 page, not a blank error).

5. EMAIL FOUNDATIONS

- Confirm your welcome series has more than one email, spaced over several days.
- Check that your abandoned cart flow is live and sends at the right intervals.
- Confirm SPF, DKIM, and DMARC records are correctly set up for your sending domain.
- Review your last 3 campaigns' open rates — under 20% usually signals a fixable issue.
- Check your list for contacts who haven't opened anything in 90+ days.

Checked a few boxes you're not sure about? That's exactly what a free audit call is for — 30 minutes, no pitch deck, no pressure. We'll walk through your store together and tell you what's actually worth fixing first.
